Haotian Zhang

hzhang44@usc.edu

Education

University of Southern California Starting Spring 2027
Incoming undergraduate in Applied and Computational Mathematics.

American University of Paris August - December 2026
Visiting Student · USC Fall Semester in Paris

Research Interests

Video reasoning; world models; applied mathematics.

I explore how models reason through visual representations, predict a changing world, and maintain a coherent understanding of objects and physical interactions.

Selected Honors and Awards

Hugging Face #1 Paper of the Week September 2026
For *Training Object Permanence in World Models*.

United States of America Mathematical Olympiad (USAMO) 2024
Qualifier; American Invitational Mathematics Examination (AIME): 13/15.

American Mathematics Competition (AMC 12) 2024
Global Top 1%.

S.-T. Yau High School Science Award - Mathematics 2024
Second Prize (Top 8), Southern Region Finals.

Berkeley Math Tournament 2023
National High Distinction (individual); national Top 2 overall and Top 3 in the Guts round.

High School Mathematical Contest in Modeling (HiMCM) 2024
Honorable Mention.

Publications

Preprint

Training Object Permanence in World Models

Haotian Zhang, Fengyuan Yu, Dezhi Luo, Haoran Sun, Zehong Zhao, Qingying Gao, ..., Yilun Du, Hokin Deng.

arXiv:2609.28654, 2026. Co-first author.

Research Experience

Hippocampal, Inc. June 2026 - Present
Research Intern

Training Object Permanence in World Models (WROP)

- Designed 150 Blender-based 3D task generators to study object permanence and solidity, supporting the project's 1.5-million-sample training corpus.
- Contributed to training a 16B-parameter video model, human evaluation, and manuscript preparation.
- Co-first authored the resulting preprint, recognized as Hugging Face's #1 Paper of the Week.

Research Experience (continued)

University of California, Santa Cruz June - August 2025
Research Intern, Summer Internship Program (SIP)

- Developed a generative-AI tool to scaffold research-paper reading through simulated reader-AI dialogue and iterative refinement of system prompts.
- Designed and evaluated prompts to help AI systems explain complex academic texts.
- Evaluated NotebookLM's Audio Overview for vocal tone, pacing, and content accuracy against professional podcast standards; explored prompt strategies for more natural narration.

Cambridge Centre for International Research (CCIR) June - September 2025
Research Student

- Completed coursework in Applied Linguistics & Big Data.
- Authored a research paper on the social functions of multilingualism along the ninth- and tenth-century Silk Road, combining linguistic theory with data-informed analysis.
